### "UNIVERSAL" COFFEE PERCOLATOR

Makes better coffee because it does not require boiling water. All other percolators do. It is boiling water that causes the bitterness, destroys the flavor and brings out the unwholesome properties of the coffee bean.

In less than one minute after heat is applied the automatic valve at the base of the tube forces the water—lukewarm, not boiling—up the tube on to the coffee in the filter cup, percolating through into the pot beneath.

It is by this method of constantly forcing the water through the coffee, while it gradually increases in temperature, that only the wholesome and nourishing elements of the coffee bean are extracted.

By the time the boiling point is reached the coffee is ready to serve—rich in strength and aroma for they have not been lost in steam—free from bitterness, for it has not been boiled.

Made of pure aluminum, four sizes, \$3.50 up; "Elite" enamel ware, colors, light blue and sage green, \$2.50 up.

## P. S.

Before purchasing elsewhere, investigate our special offer on this line of Percolators. We do not wish customers to purchase goods from our store until they are perfectly satisfied that their money has been well invested.

Your Thanksgiving dinner will not be complete without a good cup of coffee. This is the only method by which pleasing results may be obtained. Ask your next-door neighbor who has one; they will tell you that money could not buy theirs if they could not get another.
